

Maxymum

High pressure regulator

Product Code: S100422

Professional regulator for use with nitrogen or argon

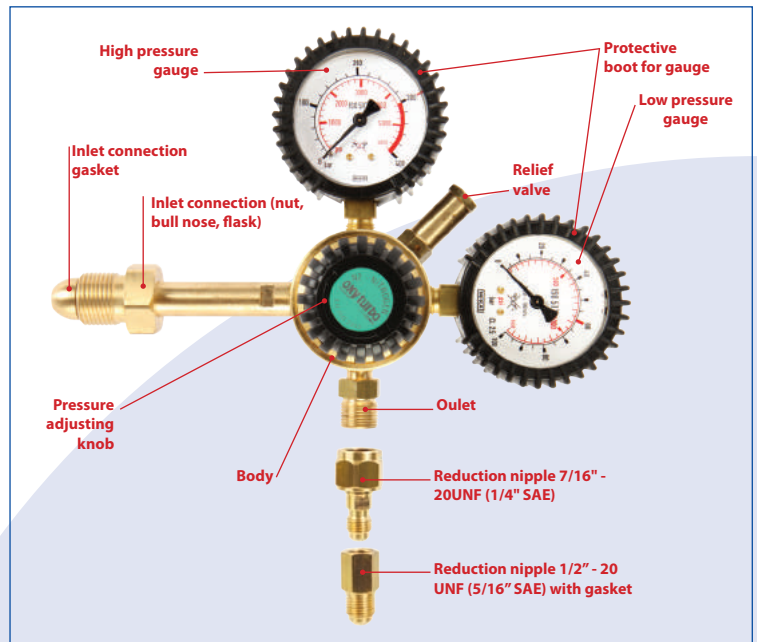

- Supplied with durable 63mm metal gauges, with protective boots.
- Central section machined from a solid brass bar, for improved rigidity and strength.
- ISO 5171 compliant gauges designed to be used with compressed gas systems up to 30 MPa (300 bar).
- Maximum inlet pressure of 300 bar, with a pressure relief valve for additional safety.

The Maxymum reduces and stabilises the pressure of the gas coming from the cylinder, allowing it to be outputted at a safe pressure for the system.

The pressure of the gas outputted from the cylinder is easily increased or decreased by a simple turn of the pressure adjusting knob.

For greater versatility, the Maxymum is supplied with outlet adapters, allowing it to be compatible with various connections (G3/8 Rhe, 1/4" SAE & 5/16" SAE).

TECHNICAL INFORMATION

Gas	Nitrogen	Argon
Colour	Black	Black
ID	N	N
P1 bar	300	300
K-class	-	-
P2 bar (outlet pressure)	60	60
Q1 m ³ /h (delivery flow)	150	150
